## INTEGRATED PEST MANAGEMENT PLAN

The Santa Maria-Bonita School District's pest management plan in conjunction with the Healthy School's Act of 2000 consists of the District using the least toxic pesticides necessary to control pests in order to insure the health and safety of our students and staff. Each year students are given a list of pesticides that the District has used in the past or will use in the upcoming school year. Within this notification is a document that allows parents to request notification by the District if pesticides are to be used at their child's school when in session.

Prior to any application the District or entity that is contracted through the District to apply a pesticide will post notification 72 hours prior to the application and leave the posting for at least 24 hours after at the site. All pesticides used on District property either by District staff or a contracted entity will be recorded and are available at the District's Maintenance and Operations Facility.

Scheduled dates of pesticide application for the 2015-16 school year are as follows:

### All District Sites

August 3rd through 7th  
November 23rd through 25th  
January 11th through 15th  
March 28th through April 1st

Pesticide to be used : Glysophate  
Reason for use: Weed control

### Miller and Sanchez Schools

September 12th  
December 12th  
March 12th  
June 11th

Pesticide to be used: Telstar and Termidor  
Reason for use: Pest control
